

Fixed Pore Structure Depth Cartridges with High Dirt Holding Capacity & Absolute Rated Filtration Efficiency

Parker's Fulflo[®] MegaBond Plus[™] are absolute rated depth cartridges. Using a new innovative manufacturing process, the MBP has higher dirt holding capacities offering long service life and virtually no contaminant migration. The MBP has a fixed core inner structure of thermally bonded continuous microfine polypropylene fibers. The outer layer fixed pore structure has been modified to maximize the graded density surface area to enhance dirt holding capacity.

Fulflo MegaBond Plus[™] cartridges are available in absolute (β = 5000) ratings of 1µm, 3µm, 5µm, 10µm, 15µm, 20µm, 30µm, 40µm, 70µm, 90µm and 120µm.

Applications

- Photographics
- High Technology Coatings
- DI Water
- Plating Solutions
- Food & Beverages
- Membrane Prefiltration
- Chemical Processing

Features and Benefits

- Fixed pore structure provides absolute rated filtration, consistent production yields and absolute particle retention.
- Microfine, thermally bonded fiber construction provides superior filtration and often eliminates the need for circulation to achieve product clarity.
- Non-fiber releasing, continuous fiber matrix prevents media migration and ensures consistent production yields and overall quality filtration performance.
- No surfactants or binders are present to interrupt product quality or cause foaming.
- Double open-end cartridges have polyolefin gaskets thermally bonded to both ends eliminating fluid bypass between the cartridge and the vessel seal.

Fulflo[®] MegaBond Plus™ **Filter Cartridges**

Polypropylene

Bonded Depth Series

- Superior inter-layer bonding eliminates contaminant unloading and channeling.
- Unique outer graded density structure increases dirt holding capacity.
- Polypropylene fiber provides broad chemical compatibility for a variety of applications.
- All materials of construction are FDA listed as acceptable for potable and edible liquid contact according to CFR Title 21.
- Pore size differentiation is achieved using fibers of differing diameters and maintaining uniform density throughout the cartridge.
- Pore sizes do not change as ΔP increases during service, providing consistent particle retention.

WARNINGI FAILURE OR IMPROPER SELECTION OR IMPROPER USE OF THE PRODUCTS AND/OR SYSTEMS DESCRIBED HEREIN OR RELATED ITEMS CAN CAUSE DEATH, PERSONAL INJURY AND PROPERTY DAMAGE. This document and other information from Parker Hannlin Corporation, its subsidiaries and authorized distributors provide product and/or system options for further investigation by users having technical expertise. It is important that you analyze all aspects of your application and review the information concerning the product or system in the current product catalog. Due to the variety of operating conditions and applications for these products or systems, the user, through its own analysis and testing, its solely responsible for making the final selection for the products and systems and assuring that all performance, safety and warning requirements of the application are met.

Bonded Depth Series

Specifications

Absolute Filtration Ratings:

1µm, 3µm, 5µm, 10µm, 15µm, 20µm, 30µm, 40µm, 70µm, 90µm and 120µm.

Materials of Construction:

- Polypropylene: microfiber 100% melt blown construction
- Center Support Core/End Caps: natural polypropylene
- Thermally Bonded Gaskets: polyolefin closed cell foam

MaximumRecommended **Operating Conditions:**

- Temperature:
 - @ 60 psid (4.1 bar): 80°F (27°C) @ 35 psid (2.4 bar): 160°F (71°C) @ 15 psid (1.0 bar): 200°F (93°C)
- Flow Rate: 10 gpm (38 lpm) per 10 in length
- Change Out △P: 35 psi (2.4 bar)
- Operating Pressure @ Ambient Temperature: 60 psid (4.1 bar)

Dimensions:

1 in ID x 2-9/16 in OD

10, 20, 30 and 40 in continuous nominal lengths

Liquid Particle Retention Ratings (µm) @ Removal Efficiency of:

Beta Ratio Efficiency	ß = 5000 Absolute	ß = 1000 99.9%	ß = 100 99%	ß = 50 98%	ß = 10 90%
MBP1	1	0.9	0.5	0.4	0.2

Flow Rate and Pressure Drop Formulae:

Flow Rate (gpm) = Clean $\triangle P \times Length$ Factor Viscosity x Flow Factor

Clean ΔP = Flow Rate x Viscosity x Flow Factor

Notes:

- 1. Clean ΔP is <u>PSI</u> differential at start.
- 2. Viscosity is centistokes.
- Use Conversion Tables for other units.
- 3. Flow Factor is $\Delta P/GPM$ at 1 cks for 10 in (or single).
